Education

University of Manchester

BSc Computer Science, First Class

September 2023 – July 2026

Manchester, United Kingdom

The Skinners School

*Alevels in Maths, Further Maths, Economics and Computer Science (A*A*A*A)*

September 2016 – July 2023

Tunbridge Wells, United Kingdom

Experience

Casual Project Assistant (Software Engineer)

June 2026 - Present

The University of Manchester (Imago Software)

- Developed a Webapp for viewing MRI brain scans, facilitating easy uploading, analysis and manipulation.
- Contributed to a full stack of technologies, including a FastAPI Python backend and ReactJS Javascript frontend.
- Deployed the project using Digital Ocean for cloud hosting and functions, with a Postgres database and S3 storage.
- Held weekly meetings with the client to ensure development was on track, applying an Agile development process.

PR Officer

October 2024 - June 2025

Computer Science Society Committee

- Led a team of six promoting Computer Science events to an audience of over 2000 on Instagram, LinkedIn and TikTok.
- Managed the production of the society's monthly newsletter, including writing content and interviewing staff members.
- Collaborated with societies across UoM and other universities for advertising, events and content creation.

Peer Assisted Study Sessions Leader and Coordinator

September 2024 - June 2026

- Led weekly sessions with 20 first-year students helping with adjusting to university and answering any questions asked.
- Planned engaging and diverse topics each week, including project work, CV improving and advice on placement years.
- Liaised with staff and 4 other Coordinators, managing 50 PASS Leaders, and 300 first year students. Managed organisational side of the scheme, including budgeting sessions, booking rooms for sessions and planning events.

Hackathon Organiser

June 2024 - November 2024

GreatUniHack Logistics Team

- Aided in organizing GreatUniHack, a hackathon open to students involving 250 participants and 14 organisers.
- Agreed upon the prizes and equipment needed for the event, accounting for the budget and the number of participants.
- Negotiated with local caterers and restaurants to assess suitability, arrange delivery and gain discounts for the event.
- Directed other team-members to ensure participant registration, screening and acceptance ran smoothly.

Projects

Bank Transaction Verification API | *Python, FastAPI, PostgreSQL*

March 2026 – April 2026

- Developed a backend banking API in Python capable of verifying and storing millions of transactions at a time.
- Deployed a FastAPI application allowing the user to upload files via curl in the terminal, and receive results as json.
- Combined a PostgreSQL database and asynchronous transactions to facilitate processing without waiting for insertions.
- Performed wide unit testing of the system using Pytest to confirm the system behaves as expected, even in edge cases.

Website Scraper | *Python, Selenium, BeautifulSoup*

June 2025 – September 2025

- Developed a Python application allowing users to retrieve statistics from gaming website www.hltv.org.
- Implemented Selenium drivers to retrieve HTML data live from the website, including JavaScript rendered content.
- Applied threading to allow up to four drivers to be active at once, halving response time for individual calls.
- Allowed users to search for players, teams and matches separately, returning an easily accessible JSON file.

Event Planning App | *Java, Springboot, Thymeleaf, HTML*

January 2025 – June 2025

- Implemented the Java Spring framework to build an events planning app, via the Model View Controller design pattern.
- Leveraged the Thymeleaf template tool to allow users to interact with the application via real-time updating webpages.
- Partnered with six other students, delegating tasks based on personal skillsets and meeting biweekly to discuss progress.
- Wrote clean unit tests for the application using JUnit, achieving a test coverage of over 90% across the application
- Presented the final product against a specification overseen by a senior lecturer, achieving an overall unit mark of 69%.

Technical Skills

Languages: Python, Java, JavaScript, C++, SQL, HTML, PHP, GLSL

Technologies: FastAPI, Flask, ReactJS, Django, Springboot, MySQL, PostgreSQL, OpenGL
